## PDI #11 Postoperative Wound Dehiscence Rate

DESCRIPTION
-------------

Postoperative reclosures of the abdominal wall per 1,000 abdominopelvic surgery discharges for patients ages 17 years and younger. Includes metrics for discharges grouped by risk category. Excludes cases in which the abdominal wall reclosure occurs on or before the day of the first abdominopelvic surgery, newborn cases with gastroschisis or umbilical hernia repair occurring before the day of the abdominal wall reclosure, cases with a high- or intermediate-risk immunocompromised state, cases with cirrhosis and hepatic failure with a diagnosis of coma or hepatorenal syndrome, cases with transplants, cases with stays less than two (2) days, neonates with birth weight less than 500 grams, and obstetric cases.

*[NOTE: The software provides the rate per hospital discharge. However, common practice reports the measure as per 1,000 discharges. The user must multiply the rate obtained from the software by 1,000 to report events per 1,000 hospital discharges.]*
