## **Index of Tables**

Table 1. Risk Adjustment Coefficients (non SES) for PQI 01 - Diabetes Short-Term Complications Admission Rate

Table 2. Risk Adjustment Coefficients (non SES) for PQI 03 - Diabetes Long-Term Complications Admission Rate

Table 3. Risk Adjustment Coefficients (non SES) for PQI 05 - Chronic Obstructive Pulmonary Disease (COPD) or Asthma in Older Adults Admission Rate

Table 4. Risk Adjustment Coefficients (non SES) for PQI 07 - Hypertension Admission Rate

Table 5. Risk Adjustment Coefficients (non SES) for PQI 08 - Heart Failure Admission Rate

Table 6. Risk Adjustment Coefficients (non SES) for PQI 11 - Community-Acquired Pneumonia Admission Rate

Table 7. Risk Adjustment Coefficients (non SES) for PQI 12 - Urinary Tract Infection Admission

Table 8. Risk Adjustment Coefficients (non SES) for PQI 14 - Uncontrolled Diabetes Admission Rate

Table 9. Risk Adjustment Coefficients (non SES) for PQI 15 - Asthma in Younger Adults Admission Rate

Table 10. Risk Adjustment Coefficients (non SES) for PQI 16 - Lower-Extremity Amputation Among Patients with Diabetes Rate

Table 11. Risk Adjustment Coefficients (non SES) for PQI 90 - Prevention Quality Overall Composite

Table 12. Risk Adjustment Coefficients (non SES) for PQI 91 - Prevention Quality Acute Composite

**AHRQ Quality Indicators  
Prevention Quality Indicators (PQI) Parameter Estimates, v2024**

Table 13. Risk Adjustment Coefficients (non SES) for PQI 92 - Prevention Quality Chronic Composite

Table 14. Risk Adjustment Coefficients (non SES) for PQI 93 - Prevention Quality Diabetes Composite

Table A.1. Population Age Categories

## Executive Summary

This document provides statistical parameters associated with Version 2024 Agency for Healthcare Research and Quality (AHRQ) Quality Indicators (QI) Prevention Quality Indicators (PQI). The parameter estimates derived for the AHRQ PQIs are based on analysis of the 2021 AHRQ Healthcare Cost and Utilization Project (HCUP) State Inpatient Databases (SID).<sup>1</sup>

HCUP is a family of healthcare databases and related software tools and products developed through a Federal-State-Industry partnership. HCUP includes the largest collection of longitudinal hospital care data in the United States, with all-payer, encounter-level information beginning in 1988. The SID contain all-payer, encounter-level information on inpatient discharges, including clinical and resource information typically found on a billing record, such as patient demographics, up to 30 *International Classification of Diseases, Tenth Revision, Clinical Modification/Procedural Classification System* (ICD-10-CM/PCS) diagnoses and procedures, length of stay (LOS), expected payer, admission and discharge dates and discharge disposition. In 2021, the HCUP databases represent more than 97 percent of all annual discharges in the U.S.<sup>2</sup>

The analytic dataset used to generate the risk adjustment regression models in this document consists of the same hospital discharge records that comprise the reference population for Version 2024 of the AHRQ QI software. This reference population file was limited to community hospitals and excludes rehabilitation and long-term acute care (LTAC) hospitals. Information on the type of hospital was obtained by the American Hospital Association (AHA) Annual Survey of Hospitals. AHA defines community hospitals as “all non-Federal, short-term, general, and other specialty hospitals, excluding hospital units of institutions.” Included among community hospitals are specialty hospitals such as obstetrics-gynecology, ear-nose-throat, orthopedic, and pediatric institutions. Also included are public hospitals and academic medical centers.

The 2021 HCUP SID includes information on all inpatient discharges from hospitals in participating States. Discharges from all 48 participating States in 2021 are used to develop area-level indicators.<sup>3</sup> This document is devoted to listing covariates and coefficients for risk adjustment logistic regression models. The regression coefficients are used by the prediction module to calculate risk-adjusted rates that account for differences in patient populations across areas. Covariates that are considered as potential risk adjusters include sex and age and the interaction of sex and age. Descriptions of the population age categories are provided in the Table A.1. Every covariate in every model is a binary indicator variable, coded using 0 or 1. The AHRQ QI software user does not need to manipulate or adjust these coefficients; rather this document is intended to make it transparent to the user how the risk adjusted QI rates are calculated.

c-statistic=0.753

C-statistics for hospital level indicators are based on the test data (a random sample of 2019-2021 HCUP reference population, not used for the LASSO feature selection).

C-statistics for area level indicators are based on the full reference population data (2021 HCUP reference population).
