#### Prepared by:

Agency for Healthcare Research and Quality
U.S. Department of Health and Human Services
<a href="mailto:qualityindicators.ahrq.gov">qualityindicators.ahrq.gov</a>

#### DESCRIPTION

Hospital discharges with postoperative respiratory failure (secondary diagnosis), prolonged mechanical ventilation, or intubation cases per 1,000 elective surgical discharges for patients ages 18 years and older. Excludes discharges with a principal diagnosis of acute respiratory failure, a secondary diagnosis of acute respiratory failure present on admission, or any diagnosis of tracheostomy present on admission; discharges in which tracheostomy is the only operating room procedure, or in which tracheostomy occurs before the first operating room procedure; discharges with malignant hyperthermia, a neuromuscular disorder present on admission, or a degenerative neurological disorder present on admission; discharges with laryngeal, pharyngeal, nose, mouth or facial surgery involving significant risk of airway compromise; discharges with esophageal surgery, a lung cancer procedure, or lung or heart transplant; discharges for treatment of respiratory diseases; and all obstetric discharges.

[NOTE: The software provides the rate per hospital discharge. However, common practice reports the measure as per 1,000 discharges. The user must multiply the rate obtained from the software by 1,000 to report events per 1,000 hospital discharges.]

#### **NUMERATOR**

Discharges, among cases meeting the inclusion and exclusion rules for the denominator, with either:

- any secondary ICD-10-CM diagnosis code of acute postprocedural respiratory failure (ACURF2D\*)
- the last date of an ICD-10-PCS procedure code for a mechanical ventilation for greater than 96 consecutive hours (*PR9672P*\*) is zero or more days after the first major operating room procedure, if the dates of both procedures are available
- the last date of an ICD-10-PCS procedure code for a mechanical ventilation for 24 96 consecutive hours (*PR9671P*\*) is two or more days after the first major operating room procedure, if the dates of both procedures are available
- the last date of any ICD-10-PCS procedure code for an intubation  $(PR9604P^*)$  is one or more days after the first major operating room procedure, if the dates of both procedures are available

#### **DENOMINATOR**

Elective surgical discharges (*Appendix E: SURGI2R*) for patients ages 18 years and older with any listed ICD-10-PCS procedure code for an operating room procedure (*Appendix A: ORPROC*). Elective surgical discharges are defined by specific MS-DRG codes with admission type recorded as elective (SID ATYPE=3).

- with any listed ICD-10-CM diagnosis code present on admission for tracheostomy (*TRACHID*\*)
- where the only operating room procedure is tracheostomy (*TRACHIP*\*)
- where a procedure for tracheostomy (*TRACHIP\**) occurs before the first operating room procedure (*Appendix A: ORPROC*), if the dates of both procedures are available
- with any listed ICD-10-CM diagnosis code for malignant hyperthermia (MALHYPD\*)
- with any listed ICD-10-CM diagnosis code present on admission for neuromuscular disorder (*NEUROMD*\*)
- with any listed ICD-10-CM diagnosis code present on admission for degenerative neurological disorder *(DGNEUID\*)*
